INSY7315 EXPO · TEAM LOGISYN · 10 November 2026

Order in, Production sheet out.

A desktop system that turns a supermarket order PDF into a full production plan. Every pan, trolley and kilogram of flour, worked out automatically.

Grace Berrill · Adriaan Kock · Matthew Rosselli · Luc Naude

A bakery that puts people first

Our Client

Anderson’s Silwood Bakery

Cape Town, Western Cape

Local Cape Town business

Bakes all different types of baked goods

Supplies all over the country

Shops such as Checkers and Spar send in their orders as PDFs.

Jobs first, automation second

Many staff have little to no formal education therefore, complex systems are not an option.

From workbooks to one screen

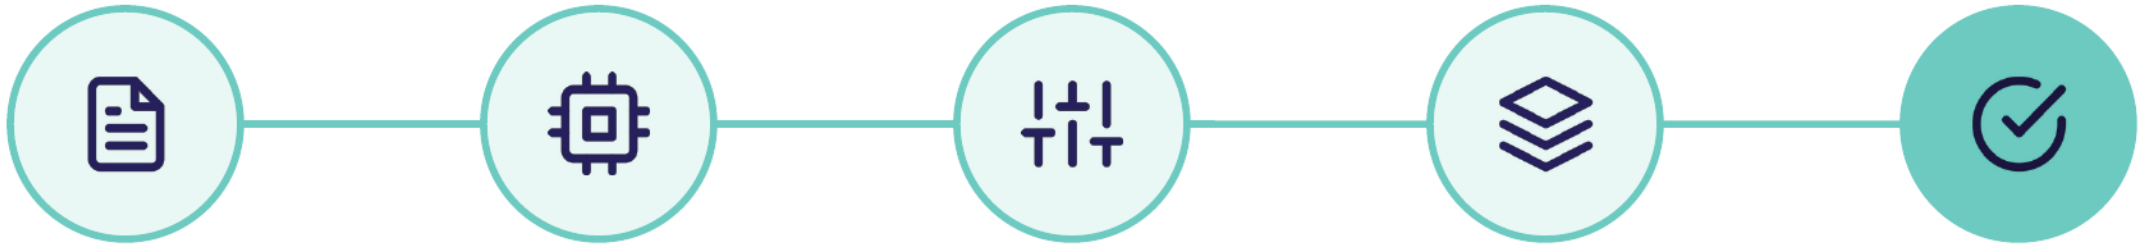

BEFORE

- Production sheets pieced together by hand across separate workbooks
- Slow and error-prone
- Hard to see where stock went, so theft slipped through

AFTER

- One system that reads the order PDFs
- Recipes scale into pans, trolley and raw materials automatically
- Every order tracked to completed

How it works

01

Drop in the order PDF

02

Line items read automatically

03

Recipes scaled to the order

04

Pans, trolleys and materials worked out

05

Tracked through to Completed

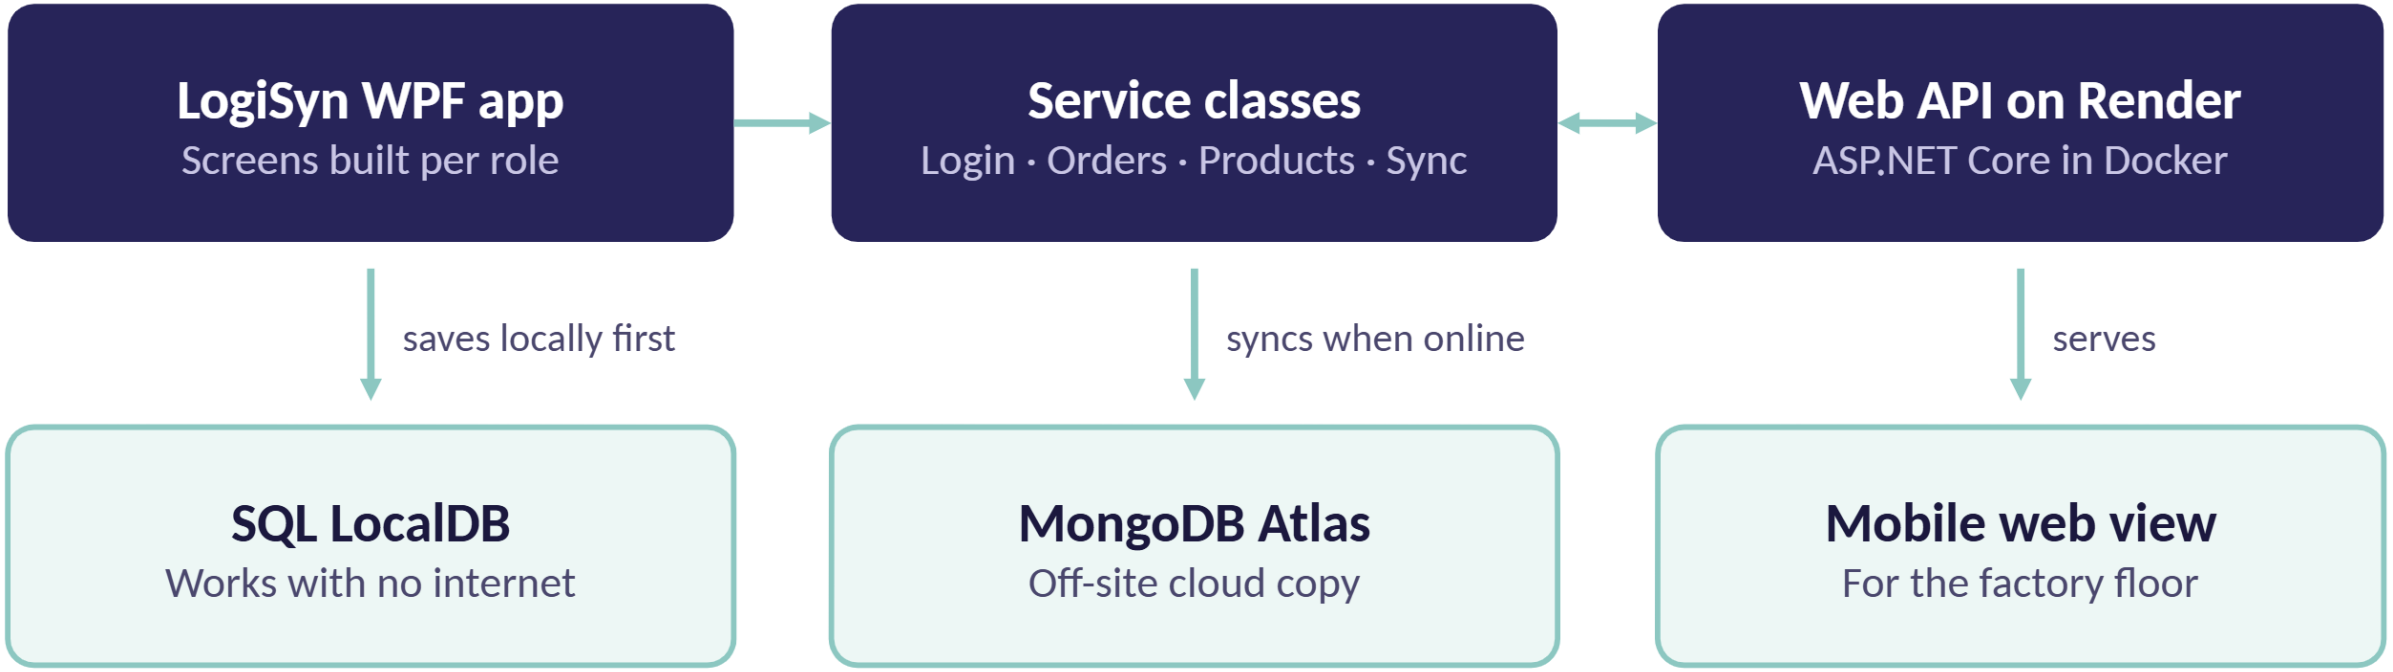

No retyping. No calculator. No separate workbooks.

Live Demo

Full video walkthrough on the system.

One install, no server to babysit

The desktop app calls the service classes in-process, so it runs as a single install.
The API tries cloud for 2 seconds, then falls back to local services.

Made for patchy factory WiFi

3

Copies of every order

Saved to a local file, SQL and MongoDB, so a dead PC does not loose work

2s

Before falling back

If the cloud API is slow, the app switches to local services

10min

Keep-alive ping

Keep the free Render host awake, so there’s no 30 second cold start

Availability over consistency, the floor never waits on the cloud.

Everyone sees only what they need

Admin

- Manage user and products.
- Excel and email export.
- Everything a manager sees.

Manager

- All orders with filters.
- Editable production sheets.
- History of completed orders.

User

- A simple view of their orders.
- Fill in and submit their order sheet.

Every tool learned its place

;¶ □• · \ ∞□• ɤ ã F¡ ה ד

Native Windows application that works offline.

ΓÉÄ□ΓĄ▶ė Ą▶□Ä Ł ş ¸ ¬B:

Free, no server setup, no internet needed.

ä Ł┼ř ŁB: □ ♦¬¸ ◙

Off-site copy if the factory PC fails.

Γ▷ɤ ã F¡ □; Ł▶Ą□ ∞i

Groundwork for multi device use.

B Ł ş ↕ Ą▶□• **Render**

Free, sustainable hosting for the client.

∞B\ ∞i]

Reads supermarket PDFs, no Adobe needed.

; ¬ Ł◙Ą¯Êä Ä

Excel exports staff already knows.

d¸ ◙ű Γ┼ř

Salted passwords, no extra library.

Thank you!
